OMG Industry

- **OMG** is a company which offers products and services, customised for the industrial logistic sector.
- **Operates with over 50 years of experience in three field of businesses**, Internationally and in Italy, where it has four operational sites.
- **OMG believes in the strength of ideas** and is committed to creating collaborations and specific projects for the industrial sector, offering high performance solutions.

FORKLIFTS

Production of customised electric forklifts, for movements of any type of goods, designed and manufactured to meet all your specific needs and operating environments.

INDUSTRIAL DOORS

Sales and maintenance of industrial doors, dock levelers, loading bay equipment and truck restraint systems.

INDUSTRIAL PAINTING

Industrial painting and sandblasting service for ferrous material on behalf of third parties.

FORKLIFTS: THE DIVISION

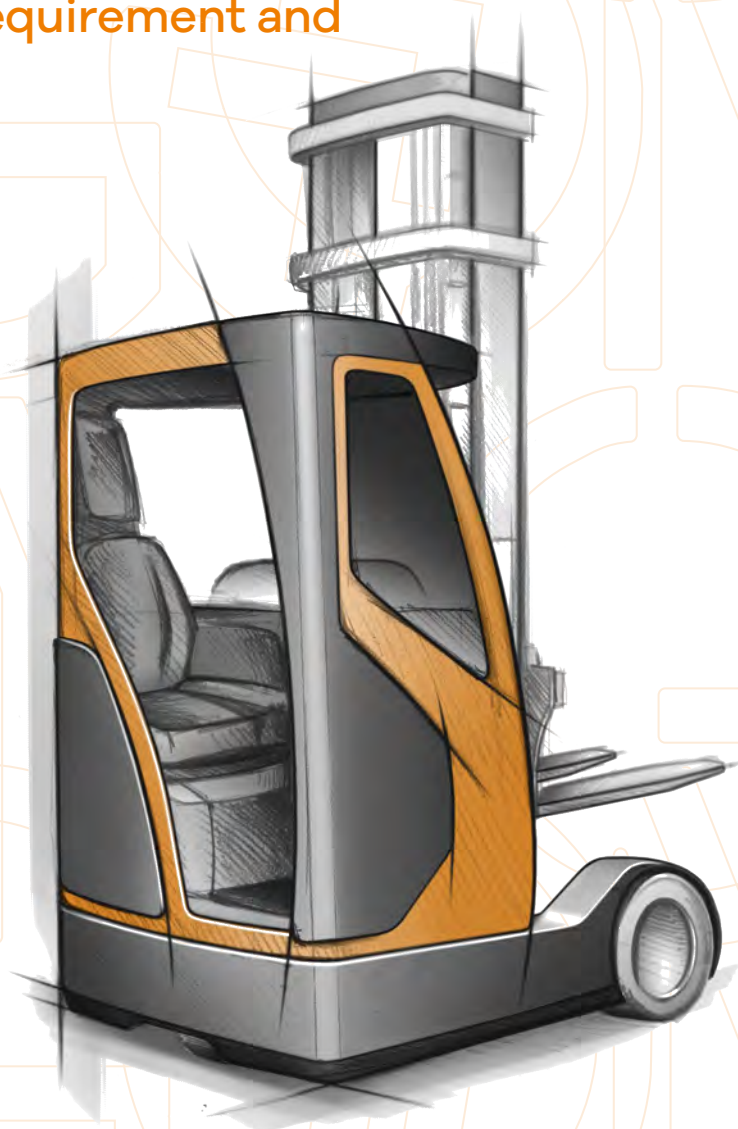

OMG produces special forklifts for handling any type of goods, designed and built to meet the each individual requirement and operational conditions.

OMG represents a unique range of solutions in the sector of special handling, operational throughout the Italian territory and in numerous European and international countries.

The success earned on the field has enabled the company to include among its customers, large and important multinationals. This in turn has earned OMG a reputation for finding the most efficient and safest solution for the movement of both standard and special loads.

Watch the
COMPANY TOUR

The OMG product range includes sideloaders, reach trucks, heavy loads machines, coil handling machines, pallet trucks, stackers and order pickers together with other special and customised solutions to satisfy any product movement.

Thanks to the experience gained over 50 years, OMG has become expert in the production of special machines for specific product sectors such as aluminum, windows, marble, glass and heavy manufacturing industries.

OMG are an ideal partner for companies where **safety, efficiency and respect of the regulations** are essential characteristics, by responding to growing market needs and designing innovative and high performance solutions.

The OMG Way

We stand by our clients at all times

- **Consulting**
We offer technical and commercial advice.
- **Design**
We have standard and customized solutions.
- **Production**
A technologically advanced production system.
- **Start-up**
Carried out by highly qualified personnel.
- **Support**
Quality maintenance and after-sales service.

WHY OMG

OMG provides detailed product training to its national and international sales teams on all specialist products. The network is composed of direct branches and highly specialist dealers, around the world, who can offer clients the best technical solution in supported by the vastly experienced internal design office.

ATTENTION TO THE CUSTOMER

Continuous and direct contact guarantees design, flexibility and speed in finding the right solutions.

SPARE PARTS

The in-house after-sales department and a vast spare parts warehouse guarantee continuous customer support.

EXPERIENCE AND HISTORY

Over 50 years of experience in the manufacturing sector guarantees the highest quality standards.

SAFETY

Compliance with the relevant regulations and certifications are in force to guarantee the integrity of the business processes.

QUALITY PARTNERS

Transparency in the exchange of information with reliable dealers and distributors.

PERSONALISED SOLUTIONS

Product customisation that guarantees greater customer productivity and better performance.

CERTIFICATIONS

For **OMG**, certifying all the production processes it's an essential requirement.

QUALITY MANAGEMENT SYSTEM-ISO9001

With this certification process, **OMG** guarantees the compliance of its products and services within precise specifications and regulations. This transmits trust to its customers, with a view to clear and transparent dialogue.

ENVIRONMENTAL MANAGEMENT SYSTEM-ISO14001

This certification also demonstrates that **OMG** has an effective management system to keep the environmental impacts of its activities under control, constantly seeking improvement in a consistent and above all, sustainable way.

HEALTH AND SAFETY MANAGEMENT SYSTEM-OHSAS45001

This certification allows employees, customers and stakeholders to learn about **OMG's** commitment to occupational health and safety. It ensures compliance with the required standards and promotes a positive safety culture in the company.

APPLICATION SECTORS

Over the years, OMG has specialised in the design and production of customised machines for handling special loads for specific market niches, where the use of a conventional forklifts, is inefficient or unsafe.

LONG AND WIDE LOAD RANGE

Watch the
MACHINES
VIDEOS

OMG offers a very wide range of products for logistics management of long and bulky loads. Starting from pedestrian operated 4-way forklifts with or without a retractable mast which represent an economic and versatile solution for companies that need to move long loads in narrow aisles without guidance systems. In addition there are multidirectional reach trucks, which can do the work of a traditional side loader but have greater manouvurability in all directions while maintaining extremely compact dimensions.

Finally, there are heavy duty 4-way and multidirectional sideloaders, which can lift, transport and store very long, bulky and heavy materials.

STACKER 716 BD-R

Economical and versatile, these machines are the perfect solution for customers who need to transport long loads in narrow aisles without guidance. The retractable mast guarantees operation in minimum width working aisles with loads that cannot be loaded by conventional forklifts. Also available with optional remote control feature.

2.0 t

**LONG AND WIDE
LOAD RANGE**

REACH TRUCK NEOS II 25 MULTI CH

Equipped with three steerable wheels, it is particularly suitable for use in confined spaces (working aisles of approximately 3 m) and for smooth sideways driving over long distances.

Available with large opening fork positioners, specially designed for transporting various different long loads. Cushion wheels ensure maximum operator comfort and performance even outdoors.

2.5 t

4-WAY AND MULTI SIDELOADER

The 4-way and multidirectional sideloaders are used wherever it is necessary to optimise the space available in warehouses, allowing a space recovery of over 45% compared to normal counterbalance forklifts. It can operate in warehouses with cantilever or pallet racks installed.

1.5
8.0 t

SIDELOADER ORDER PICKING

The main feature of the sideloader order picker is the elevating driver's cab, allowing the operator to be lifted together with the forks. This improves visibility, efficiency and safety when carrying out all picking or depositing operations (e.g. bars, tubes, profiles) directly from the racking, without lowering the entire load.

HEAVY LOAD RANGE

Watch the
MACHINES
VIDEOS

OMG offers an extensive range of machines for handling heavy loads. Starting with special electric pallet trucks with pedestrian or ride-on operator options, for loads up to 15 tonnes. In addition there are platform trucks with capacities of up to 45 tonnes equipped with customised platform dimensions. The range is completed by the new 4 tonnes capacity reach trucks. All solutions guarantee greater operator safety and reduced product damage.

PLATFORM FOR MOULDS AND INSTALLATIONS

There are a complete range of machines for moving industrial molds. The platform in the photo is used in the maintenance operations of a leading company in the supply of specialised equipment for the printing and packaging industry.

330 BE RADIO-CONTROLLED PLATFORM

The special 330 BE platform is ideal for handling heavy and expensive loads such as marble and glass. It can be manoeuvred using a remote control, ensuring greater safety for the operator and the load. It features a customised platform size with a load capacity of over 20 tons.

over
20 t

REACH TRUCK NEOS HEAVY DUTY

The new heavy duty Neos with a capacity of 4 tons is ideal for handling a combination of heavy and huge loads. Designed to have the best ergonomics possible, it has compact dimensions in relation to its capacity. It also features a high residual capacity.

4.0 t

REELS AND COILS

Watch the
MACHINES
VIDEOS

OMG designs and manufactures forklifts for handling reels and coils fitted with specific attachments capable of handling, transporting and storing different types of products in terms of both size and material. We can provide shaped forks in according to the length and the diameter of the reels to be handled and spikes attachment that allow the load to be lifted from inside.

REELS AND COILS HANDLING TRUCK 775 BLK-P

This special 775 BLK-P reel and coil handling truck, with a capacity of 4 tons, is used by companies operating in the paper and corrugated packaging sectors. It is equipped with a hydraulic positioner that allows the tapered forks to be adjusted for handling reels of different diameters. Operator comfort and safety are optimised with a cushioned platform side protection guards.

8.0 t

REELS AND COILS HANDLING TRUCK 330 BE

Equipped with tapered forks, this special 330 BE coil handling truck is used for handling reels and coils which are very heavy or large in size, over medium to long distances. It is also used by companies operating in the cable manufacturing sector or in the paper industry. It can be equipped with shaped forks of customised length and capacity.

10 t

775 BLK REELS AND COILS HANDLING TRUCK WITH SPIKE

This special 775 BLK coil handling truck is equipped with a spike attachment that allows steel coils of different sizes to be lifted from inside. It can be also operated by using a radio remote control.

15 t

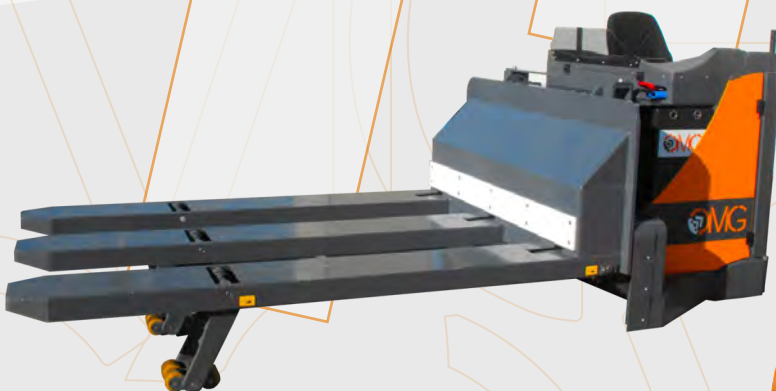

AIRPORTS

Watch the
MACHINES
VIDEOS

OMG has designed and manufactured special forklifts to manoeuvre ULDs (Unit Load Devices) on slave pallets, used in the Air Cargo sector. Machines with two or three forks, such as the NEOS 2F or NEOS 3F, are adapted to the specific needs of the airport sector, which increasingly requires customised solutions.

NEOS 3F AIR CARGO

It is used in the airport sector, particularly for handling ULDs, pallets or containers which are loaded onto aircraft cargo bays. It is fitted with three forks giving a maximum load capacity of 7.5 tons.

7.5 t

INDUSTRIAL AUTOMATION

Watch the
MACHINES
VIDEOS

Thanks to established partnerships with leading companies in the sector, OMG is able to manufacture AGVs (Automatic Guided Vehicles) capable of handling movements in a fully automated and reliable manner. By using this type of machine to manage repetitive handling processes, it is possible to increase productivity, reduce costs and increase safety levels.

AGV PLATFORM

OMG is able to design platforms with automated guidance for transporting heavy and wide loads, for heavy metal industries such as aluminium and steel.

STANDARD FORKLIFTS

Watch the
MACHINES
VIDEOS

OMG's range of standard forklifts extends to numerous models and applications. Discover the benefits of these different machines: from pallet trucks to reach trucks, from order pickers to sideloaders and stackers. Our sales network is available to analyse each specific requirement and with the support of the design office, provide the best technical solution possible.

715 FS STACKER

Counterbalanced stackers with FEM forks are ideal for use in places where the use of forklift with straddle legs is not possible (e.g. special pallets or shelves with bumpers). It represents a valid alternative to the use of large counterbalance forklifts, increasing safety and avoiding the need to have a special operator licence.

up to
2.0 t

STANDARD FORKLIFTS

716 BLK - 720 BLK STACKER

The 716 - 720 BLK electric stacker is designed for handling special loads such as pallets with non-standard dimensions. The wide straddle legs allow the forks to be lowered to the ground allowing a wide variety of loads to be picked up. Ideal for use in combination with equipments (e.g. clamp).

1.6
2.0

REACH TRUCK NEOS II SE

The OMG reach truck has compact dimensions and high versatility thanks to its super-elastic wheels (drive and load wheels), making it possible to operate on uneven surfaces which typically restrict the use of conventional reach trucks for these working environments.

1.6
2.0 t

TOW TRACTOR 620 PF-T

The 620 PF-T ac are a new series of ride-on tow tractors, manufactured by OMG for intensive, flexible and efficient use. With towing capacity of up to 10 tons and the possibility to install various types of hooks, the OMG tractors can adapt to many application.

10 t

AFTER-SALES

OMG continuously supports its customers in after-sales service, which is particularly important for customised machines that are often crucial in customers' production cycles. This is precisely why the company has developed a wide range of tailored after-sales services.

AFTER-SALES DEPARTMENT

OMG has a comprehensive in-house after-sales department at its Gonzaga site which constantly monitors customer requirements, providing them with complete assistance, with a range of services including preventive maintenance and 'on-call' repair support.

SPARE-PART WAREHOUSE

Our dedicated spare parts warehouse provides fast response to customers' needs and has a large parts stock, including those required for special machines. We also offer recommended spare parts packages to ensure downtime is minimised.

Watch the
AFTER-SALES
VIDEOS

A team of highly qualified inhouse technicians and external partners guarantees fast and efficient support. Thanks to a close partnerships with a network of authorized dealers and workshops, OMG can maintenance or repairs nationally and internationally. Professionalism, competence, speed and clarity are the company's constant aim.

TRAINING COURSE

OMG's after-sales department regularly organises technical training courses to empower customers and partners for the servicing of machines during their life cycle.

QUALIFIED PARTNERS

Thanks to the careful selection of qualified partners, both in Italy and abroad, OMG provides fast assistance in the event of breakdowns, to its customers. By utilising the latest technologies, it is also possible to provide remote service support, to optimise problem solving.
